EDUCATION

North Carolina State University | Raleigh, NC
MS in Computer Science **January 2025 – Present**
Relevant Courses: Cloud Computing Technology, DevOps, Software Engineering

The University of North Carolina at Greensboro | Greensboro, NC
BS in Computer Science, Data Science & Big Data concentration **August 2022 – December 2024**
Relevant Courses: Data Structures and Algorithms, Machine Learning, Data Science
Awards & Honors: Dean's List (Fall 2024, Spring 2023, Fall 2022)

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, Swift, SQL
Frameworks & Libraries: Angular, Express, NextJs, React, Spring, Tailwind CSS
Technologies/Tools: AWS, Azure, Docker, GCP, Git, M365

EXPERIENCE

Software Engineer Intern | UBS | Morrisville, NC **June 2026 – August 2026**
- Built interactive UI components, enabling dashboard to update dynamically from real-time data feeds
- Executed cross-branch test plans to validate callback behavior and data synchronization across multiple environments

Quality Engineer Intern | Lenovo | Morrisville, NC **September 2025 – December 2025**
- Assist Level III Product Engineering team in root-cause analysis of ThinkPad hardware and software issues
- Built automated **PowerShell** scripts to trigger hardware/software failure scenarios and deploy fixes
- Documenting test results and findings based on the analysis performed in the lab

IT Intern | Arch Mortgage Insurance | Greensboro, NC **June 2025 – August 2025**
- Developed a **Retrieval-Augmented Generation (RAG)** system using **Copilot Studio AI Agents** to help underwriters query company, federal, and internal guidelines, improving efficiency by delivering answers to policy-related questions
- Gained hands-on experience with Agile methodologies, actively participating in sprint planning, daily stand-ups, and learning and understanding team workflows in development processes

PROJECTS

Veto | Personal Project
- Utilized: **Azure, Express, React, Tailwind CSS, GCP, Claude Code**
- An interactive poll application to help a group of people with deciding where to eat by giving personalized recommendations
- Authored and directed a Claude Code **multi-agent workflow** to build features, with human review before every commit
- Established real-time voting functionality using **WebSocket** connections, allowing all users to view live updates on poll
- Integrated the **Google Place API** to provide location recommendations based on user preferences and poll results

Spotify Pomodoro | Personal Project
- Utilized: **Angular, Tailwind CSS, Spotify Web API**
- A single-page Pomodoro technique application to enhance focus and productivity of users
- Integrated Spotify OAuth authentication, enabling users to access and play playlists directly from the application
- Followed Spotify's Authorization Code with PKCE flow to securely handle user authentication with industry practice

Flores and Sons Remodeling | Freelance Project
- Utilized: **AWS, React, Go, Tailwind CSS, MySQL**
- Designed a website for a company using **Figma** for design, increasing customer engagement through a user-friendly interface
- Streamlined collection and management of potential clients' information during quote requests
- Implemented cloud infrastructure and deployment guidelines, CI/CD workflows to ensure updates to production environments

EXTRA-CURRICULAR

Volunteer | Kramden Institute | Durham, NC **July 2026**
- Ran hardware and system diagnostics to identify issues and determine whether equipment met refurbishment standards, while sorting and evaluating devices to maximize technology reuse

Participant | Arch MI Hackathon| Greensboro, NC **June 2025**
- **1st Place for Best Overall Solution** in company-wide hackathon for developing a visualization tool that assess loan risk exposure in areas affected by natural disasters, supporting strategic decision-making
